MVP Scope Agreement

Project	Autonomous Mining Equipment Market Map
Client	Dr Adrian Boeing, UWA
Prepared by	Hans Lionar, Project Manager, Group 5, CITS5206
Date	16 October 2026, revising the version of 8 October
Based on	Software Requirements Specification, version 0.6

This document sets out what Group 5 delivers this semester. It revises the version sent on 8 October to match what was built. We would be grateful if you could confirm your agreement by signing at the end. Any changes are welcome; please mark them on the page.

Changes since 8 October.

- Requesting changes from a contributor moves to the next stage. Until a contributor can reply, the administrator corrects the record and approves it, or rejects it with a note (question 7).
- The administrator may also correct a site's coordinates; the change applies to every deployment at that site.
- A warning for possible duplicate submissions and a history of every submission and its decisions are now built, so they move from "If time allows" to the delivered scope.

We will deliver

These items are committed; the project is not complete without them.

Area	What is delivered
Data	• Each deployment is recorded at a mine site, with the machine manufacturer, type, model and quantity, the technology supplier, the automation level, surface or underground, the commissioning date and its status. • Machine manufacturer and technology supplier are held separately.
Automation level	• Four levels, named as in your dataset: Highly Autonomous, Semi Autonomous, Teleremote and Operator Assistance. • The contributor states the level; the administrator confirms it on approval and may correct it.
Map	• One marker per mine site, with site detail on selection. • Operational deployments by default, with a "show decommissioned" checkbox. • Filter by technology supplier. • A year control showing the map as it stood at the end of a past year.
Analytics	• Headline counts of machines, sites and countries. • Machines in service over time. • Machine counts by country and by machine type. • Market share by technology supplier and by machine manufacturer. • The same filters apply to every chart.
Equipment register	• Every record in one table that can be searched, filtered and sorted, with export for analysis.
Contribute	• A public form with no account required; an email address is optional. • Required fields: mine site and its country, machine manufacturer, machine type, machine model, quantity, technology supplier and automation level. • Model variant and technology product are optional. • Evidence is provided as public links.
Review	• Nothing is published until an administrator approves it. • The administrator reviews each submission as a whole and approves it, or rejects it with a note. • Quantity, level, supplier, status and dates, and a site's coordinates, may be corrected before approval; a wrong site, manufacturer, model or machine type is rejected for resubmission. • A warning shows when a submission may duplicate a record at the same site, and every submission's decisions are kept in a history the administrator can view.

Area	What is delivered
Accessibility	• Designed for non-technical and colour-blind users, to WCAG 2.1 AA: readable contrast, no meaning carried by colour alone, keyboard operation and labelled forms.

If time allows

Priority	Items
Should: intended, and delivered unless something unforeseen arises	More map filters (country, region, machine type, automation level, commodity, surface or underground). More analytics (share by automation level, machines commissioned each year, rankings within a machine type, payload class). A detail page for each machine model. Revision history for corrections. Spam protection on the form. Linked media. A contact route for bulk data, imported manually. Whether the automation was factory-installed or retrofitted (optional field).
Could: delivered only if the items above are completed early	Requesting changes, with the contributor able to reply (question 7). Automated evidence check to help the administrator (your "MVP two"). Market events feed. Sign-in with Microsoft or Google. Growth rate by country. A satellite-view link on the review screen, to check that a claimed site exists.

If delivery has to be reduced, we will protect the functions in this order: equipment register, contribute and review, map, analytics. Please let us know if you would rank them differently.

Out of scope this semester

- Satellite imagery on the public map; you described it as a bonus, so it is a candidate for a later version
- An option to show unverified data; public pages show verified records only
- Uploading evidence files; evidence is public links only
- Automatic messages to contributors about the review result; the administrator follows up by email
- Self-service bulk upload
- Screens for a site's companies and their roles; the database holds them, no screen shows them
- The mine's own operating status; status is recorded per deployment
- An automation level per technology product; the level is recorded per deployment
- Forecasting and market projection
- Sensor-level detail and joint-venture ownership percentages
- A mobile app

Hosting, handover and licences

- **Hosting:** the MVP runs on a public host. Moving it to a UWA environment is a handover step, not part of the MVP.
- **Handover:** you receive the source repository, with instructions to install and run the system.
- **Licences (proposed):** CC BY 4.0 for the dataset and MIT for the source code. Please let us know if you would prefer different licences.

Seven questions

We would be grateful for your answer to each; please tick one, or reply by email.

#	Question	Your answer
1	A record needs at least one evidence link before it can be approved. Is that acceptable?	☐ Yes ☐ No
2	May a contributor answer "Not sure" for the automation level, leaving the administrator to set it?	☐ Yes ☐ No, always choose a level
3	What does Operator Assistance cover?	☐ Line-of-sight (radio) remote control ☐ In-cab operator assistance ☐ Both
4	Should we connect the automated evidence check (your "MVP two") to the review screen? It works today as a separate module. With a free local check it judged 105 of 110 test facts correctly; adding a paid check (Claude Haiku) gave 110 of 110, at an estimated cost of about US$5 a month for 1,000 submissions.	☐ Yes, with the paid check ☐ Yes, free check only ☐ Not this semester
5	What should the product be called, and is there a logo you would like us to use? The top-left corner of the site currently shows a placeholder.	Name: _____ Logo: ☐ I will send one ☐ No logo ☐ Please design one
6	Would you like access to the source repository on GitHub? If so, please give us the GitHub username to add.	☐ Yes, username: _____ ☐ Not for now
7	When an administrator requests changes, how should the contributor reply? Contributors do not sign in, so a record sent back needs a way to return to review.	☐ By email; the administrator updates the record ☐ Through a private link kept in the contributor's browser ☐ Both: email now, a private link later

Agreement

I agree that the scope above is what Group 5 delivers this semester, with any changes I have marked.
